10

Report Development

11

Insights Generation

Four Purpose-Built Dashboards

Each view addresses a distinct analytical need

01 – Monthly View

Month-by-month trends and patterns

02 – Consolidated View

Holistic performance across date ranges

03 – Patient Details

Granular patient-level records

04 – Key Takeaways

Actionable insights and recommendations

Core KPIs

Four metrics, each tracked with daily area sparklines

Patient Volume

Total daily ER visits

Average Wait Time

Time until first medical contact

Satisfaction Score

Daily patient satisfaction average

Referrals

Daily department referral count

Monthly View

Monitor key metrics month-by-month to identify patterns and areas for improvement

Charts Included

- Admitted vs. Non-Admitted patients
- Patient Age Distribution (10-year intervals)
- Department Referral Trends
- % Seen Within 30 Minutes
- Gender & Racial Demographics
- Patient Volume by Day & Hour

Consolidated View

Holistic hospital performance across any customizable date range

What It Covers

- Same metrics as Monthly View
- Aggregated over flexible date ranges
- Broader trend analysis for leadership

PATIENT VOLUME

Total admissions for the period

WAIT TIME

Average wait across date range

SATISFACTION SCORE

Overall patient satisfaction trend

DEPARTMENT REFERRALS

Distribution by department

Patient Details

Granular patient-level data for detailed analysis and case-level troubleshooting

The illustration shows a computer monitor in a server room. The monitor displays a web application titled 'Medical Records'. The application has a sidebar menu on the left with categories like 'Retroconnaiss', 'Onle', 'Standards', 'Rentants', 'Pastocals', 'Sarals', 'Sarloadic', 'Chaf', 'Saulinis', 'Sapbatee', 'Orde', and 'Pecoplotes'. The main area shows a table of patient data. The table has columns for 'Diat', 'STlics', 'Mecabods', 'Diat', 'SEUR', 'Nlecdonts', and 'MoFZB'. The data is organized into rows, each representing a patient record. The table is titled 'Medical Records' and has a search bar and a dropdown menu for 'Disabas'. The table is also titled 'Datalie Records' and has a search bar and a dropdown menu for 'Disabas'.

Diat	STlics	Mecabods	Diat	SEUR	Nlecdonts	MoFZB
211	Ro6261%	YdkS	04.6Q	1	0	520.339
2%	Rs423403	Nattns	1.2.6Q	10	10	130.90
3%	Rs423403	MaxochesIC	10	10	10	230.90
3%	bo22310S	Mo6tas	1K	10	10	330.383
9%	mo22310S	DitBiss	10	10	10	330.339
8%	no76308	DMD07:sis	10	10	10	129.31 (6)
3%	her203158	DitUreat	10	10	10	190.56.09
24	nsd73.110	RHEXS	10	10	10	123.211/13
8%	mo703:80		10	10	10	139.291/66

31	ms223004		429.00	120.809	10	139.291/66

Grid Fields

- Patient ID & Full Name
- Gender & Age
- Admission Date
- Patient Race
- Wait Time
- Department Referral
- Admission Status

Key Takeaways

Descriptive analysis of all metrics — patterns, anomalies, and actionable recommendations

1

Patterns

Recurring trends across all dashboards

2

Anomalies

Outliers and operational red flags

3

Recommendations

Actionable steps to optimize ER operations

From Raw Data to Actionable Insights

Every phase builds on the last — ensuring clean, modeled, and insight-ready data

This end-to-end approach ensures each dashboard is grounded in validated data and aligned with stakeholder requirements.

What Success Looks Like

Operational Visibility

Real-time ER performance at a glance

Data-Driven Decisions

Insights that drive staffing and resource allocation

Patient-Centered Care

Shorter waits, higher satisfaction scores
